

## **Care & Maintenance Instructions**

- Glacierstone is an engineered material that is more resistant to surface damage than other materials, but like most things, better care will make for a longer life. Glacierstone is easy to maintain. For everyday cleaning the sink can easily be wiped down with a gentle liquid household cleaner to remove any stains.
- Glacierstone resists scratches and chips thanks to its solid construction. If scratches or stubborn stains do appear, we
  have included a buffing kit with your sink. These blemishes can easily be removed with your kit. If you have misplaced the
  kit, an abrasive household sponge or even a fine grit sandpaper can be substituted. Our recommendation if this is the case,
  would be a 3M Scotch-Brite pad and Comet, Ajax, or any other powder detergent, in a circular motion buffing out the
  affected area until the mark vanishes. While scouring your sink may seem counter-intuitive, it is the most effective way to
  keep the product looking flawless. Buffing your sink will not damage the product or its finish. The special satin finish of this
  will improve with the use of powder detergents, but liquid detergents will also work.
- Please be careful with drain cleansers. Make sure that the cleaning agent goes down the waste outlet and that it does not sit in the basin. Some drain cleaners react relatively violently as one would expect by the very nature of the requirement of the product and instructions for handling are always given precisely on the product. Glacierstone is resistant to heat and is unlikely to mark below temperatures of 360 degrees fahrenheit. As a precaution, it is best to not rest pots and pans taken straight from the stove burner or oven and rest them in the sink. Scratches and small chips from sharp utensils can occur but can easily be removed by sanding with a 3M Scotch-Brite pad for fine scratches, and sandpaper for deeper scratches and small chips. Use a course sandpaper (100 150 grit) to start. Finishing off with fine grit sandpaper and a 3M Scotch-Brite pad. Glacierstone is corrosion resistant, and non-porous which hinders bacteria growth and dirt deposits. The finish is guaranteed to remain brilliant from discoloration for 15 years of regular daily use.

If you have further questions about taking care of your sink or have a particularly tough stain, feel free to contact us and we will be happy to help.
